

3PL and Fulfillment Warehouse Management System (WMS) Modular Warehouse Management Suite

The flexible and powerful core of Logimax, our WMS Foundation is a browser-based system that contains everything public and private warehouses need to be successful out-of-the-box: complete multi-customer and inventory control, integrated RF data collection, third-party and intra-company billing, report writing, shopping cart connectivity, and customer web self-service.

As a browser-based solution, Logimax presents managers and CSRs with an attractive user interface that increases productivity and provides anytime/anywhere access via a secure web connection. Our advanced technology also makes it quick and easy to integrate to ERP, TMS, EDI, shopping carts, and other software systems – from SAP® to QuickBooks.

Key Benefits

- Improve customer satisfaction with improved accuracy
- Faster return on investment: installs in just one week!
- Increase productivity with flexible, paperless automation
- Integrated with all popular ecommerce shopping carts including Amazon, Shopify, Magento, and ZenCart.

WMS Foundation

Manage your warehouse business

- Inventory Control
- Integrated Base RF
- Integrated Billing
- Rich Report Writer
- Customer Self-Service

Modules

Extend your functionality

- EDI & eCommerce
- RF Task Automation
- Assemble-to-Order
- Yard Management
- Multi-Carrier TMS

Metrics & KPIs

Monitor performance & results like never before

- KPIs
- Revenue Analysis
- Cost Analysis
- Velocity Trends
- Much More

Warehouse Management with Logimax

Logimax is extraordinarily fast to implement – often just 30 days – even while supporting complex functional and billing requirements. This is due to our unique Customer Profile approach that defines and enforces customer and item-specific rules based on customer contracts. For every service and transaction, the profiles automatically enforce rules, rates, processes, location selection, product rotation, packing, stacking and any other criteria associated with a particular customer or item. This remarkably efficient approach enables Logimax customers to earn a faster, better ROI on a WMS investment while better serving their customers.

Additional Warehouse Functionality

- ◆ **Inventory** - From the ground-up, Logimax was built specifically for public and 3PL warehouse management. With easily configurable functionality for receipts, putaways, transfers, counts and picks. Based on easy-to-use Customer Profiles, Logimax enables public warehouses to run more efficiently.
- ◆ **Integrated, Real Time Data Collection** - The Logimax Foundation comes with RF-enabled support for receiving, put away, inventory counting, inquiry, re-warehousing, and basic order picking to enhance accuracy, accountability, and traceability. Logimax RF is integrated with all other Logimax modules for immediate use.
- ◆ **Integrated Third-Party Billing** - Accurate, on-time billing is automatic with Logimax. Some Logimax customers improve revenues by up to 10% solely as a result of more accurate billing. Leveraging your customer and item profiles, every service and activity is recorded, accounted for, and invoiced.

◆ **Rich Report Writer** - Along with a rich set of pre-defined reports that can be printed, faxed or e-mailed, Logimax Base includes a built-in drag-and-drop report designer. Our open database architecture also allows you to use third-party report writers.

◆ **Customer Web Self Service** - Being able to quickly and cost-effectively meet customers' inventory data needs is essential in a "need it now" world. Customers want the ability to retrieve key reports such as .pdf files or spreadsheets, enter orders and view activity and inventory at their convenience.

Modules

Logimax modules enable public warehouses like yours to expand services, increase productivity and profitability and ultimately improve your strategic value as a trading partner. Each Logimax module seamlessly integrates with our WMS Foundation and is rapid-to-implement.

EDI & Ecommerce

Supporting Electronic Data Interchange (EDI) is required by most companies because it enhances the efficiency, accuracy, speed, and traceability associated with transmitting data to and from trading partners. Logimax also integrates with all the popular shopping cart applications, from Amazon to ZenDesk.

Logimation – Wireless Task Automation

A major advancement in WMS functionality, Logimax' Wireless Task Automation module provides companies with on-the-fly task assignment and real-time, paperless task visibility for every warehouse activity. Logimax assigns tasks (via RF) that consider a user's login and equipment as well as pre-defined rules, task priorities and the Logimax Appointment Book.

Assemble to Order

Kitting, assemble-to-order and related light-manufacturing services are an effective way to generate new revenue from existing customers, attract new business, and deliver more value to customers' supply chains. Our Assemble-to-Order Module includes a comprehensive bill of material (BOM), cost and budget analysis, work order and shift planning.

Yard Management

Logimax Yard Management (YMS) module provides companies with the ability to track trailers' and containers' pertinent data, including who brought it in, where it is, what's on it, how long it's been there, where it's supposed to be, and by when.

Multi-Carrier Transportation Management Solution (TMS) – Varsity Logistics

Varsity ShipSoft-Parcel™ and ShipSoft-Freight™ support a wide array of shipping needs—from companies with single carrier domestic shipments to multi-site organizations that ship globally through multiple parcel, LTL, truckload, and rail carriers. With Varsity, companies purchase only the functionality they require. When both parcel and freight shipping are needed, Varsity ShipSoft-Parcel and ShipSoft-Freight integrate for centralized shipping management..

Since 1995, Logimax Inc. has provided an exceptionally robust, reliable, and affordable solution to the challenges of single- and multi-customer warehouses. Our browser-based solution includes an uninterrupted growth path for customers.
